Radiation Exposure Policy during Externships

In accordance with AVMA guidelines, you must provide CSU with a record of radiation exposure accrued during all approved externships (i.e. those for which you are seeing academic credit). Exemptions include those entities that do not expose students to radiation, and those that provide less than 10% of the occupational radiation worker dose. It is your responsibility to verify the need for this monitoring and a dosimeter badge, if indicated, while at the externship site as you are making initial arrangements. The site is required to provide the badge; you may not take a CSU badge to the site. The responsible individual at the site will assign the badge and use it to record your exposure during the externship period.

If you establish that an exposure record will be required, please identify the person who will provide the report to the 3rd and 4th year Student Services Coordinator at CSU (Deb Liptak), providing name and email. This individual must have indicated association with the externship location, and responsibility for radioactive materials or radiation producing machines.
