The department accepts applications on an ongoing basis from individuals who are interested in obtaining research positions within the department in laboratories in the areas of infectious disease research. The open positions may be temporary or special assignment and may be for limited time periods.

Research Associate positions are available in the Department of Microbiology, Immunology and Pathology in the area of infectious disease research.

Applicants must have a Bachelor’s degree in microbiology, biology, molecular biology, biochemistry or a closely related field.

These positions include interaction with the Principal Investigator as well as other research assistants. The individual will be part of a team of researchers completing a federally funded research project and will have a broad range of responsibilities.

The successful candidate must demonstrate U.S. employment eligibility at time of application; CSU will not provide visa sponsorship for this position.

To Apply:
For full job announcement and to apply go to http://jobs.colostate.edu/postings/37359.

This pool will expire on March 31, 2017. Individuals wishing to be considered beyond this date must reapply.

CSU is an EO/EA/AA employer and conducts background checks on all final candidates.
