Applying Transdermal Medications to Cats

You should store this medication at room temperature away from heat and light and out of the reach of children. This package is not child-proof.

Directions:
1. Your pharmacist will have provided you with gloves or glove finger tips with the transdermal medication. Place a glove tip on both thumb and index finger.

2. Use a damp paper towel or cotton ball to clean the inside of the cat's ear. Do not attempt to clean the cat's ear canals, it is not necessary or desirable to do so.

3. Remove the tip from one syringe and squirt entire contents (or the amount for the correct dose for your cat) on tip of gloved index finger.

4. Apply to inside of cat's ear (pinna) with index finger and use thumb and finger to massage into ear until completely absorbed. Do not touch the drug with your bare hands.

5. Do not get any drug into the canals (horizontal or vertical) of the ears.

6. Using ungloved hand, turn on faucet and rinse gloved fingertips carefully under running water.

7. Fling tips off fingers into sink (being careful not to invert glove tip).

8. Pick up and thoroughly dry with disposable paper towel.

9. Return clean, dry glove tips to zip lock bag for next use.
