Number of Faculty in Direct Support of Program: 5

Prerequisites other than being a Graduate of a College of Veterinary Medicine

Minimum of one year of internship or private practice
Requirements for Application

1. Application Packet (We will no longer select our residents through VIRMP; the selection will be done independently by the CSU anesthesia service)

- Veterinary School Official Transcript from University Registrar
- Personal Statement (letter of intent)
- Curriculum Vitae
- 3 - 6 Letters of Reference

Description of Program

The three year program is designed to provide exposure and expertise in the principles and practices of anesthesiology of both large and small animals, and is combined with a Masters of Science degree program.

The program places an emphasis on the treatment of perioperative pain and offers additional opportunities to gain experience in the treatment of chronic pain. The anesthesia section consists of five Board Certified Veterinary Anesthesiologists and 13 full and part-time anesthesia staff. The anesthesia section anesthetizes approximately 4,000 cases per year, primarily dogs, cats, and horses, with occasional food animals and exotic animals. The program will emphasize completion of requirements for successful fulfillment of credentials to the American College of Veterinary Anesthesiologists (ACVA).

The resident is expected to attend and contribute to resident/graduate seminars during the school year. Additionally, two publications are required from the resident. These are to be determined with the guidance of the resident/graduate student’s advisory committee /mentor. At least one publication must meet the criteria set forth by the ACVA. Residents are advised, but not required, to become licensed and accredited in the State of Colorado. In accordance with college policy, residents and interns are not permitted to practice veterinary medicine in private/specialty practices in Colorado during the course of their program.

The resident will be responsible to provide anesthesia and perioperative care to both small and large animal patients. As the resident progresses through the training program, he/she will be expected to assist the faculty in the supervision and training of third and fourth year veterinary students in the anesthesia rotation. The resident is expected to share after-hours emergency duty with the staff.

Residents are required to enroll in the graduate school and take appropriate course work leading to a masters degree. State funded residents must register for a minimum of 5 credits or continuous registration each semester (Fall and Spring) throughout the residency program in order to be classified as a student and avoid having retirement benefits deducted from their monthly salary. The College will cover the cost of in-state tuition for up to 6 credits each semester (36 credits over 3 years). Enrolled residents will receive tuition assistantships to cover out of state tuition costs during the first year of the residency program. Thereafter, residents who have established Colorado Resident status will continue to have in-state tuition costs covered by the College. It is, therefore, very important that a resident establish Colorado residency status during the first year of their residency in order to avoid paying out of state tuition costs in the second and third years of the residency. International students will not be able to establish Colorado residency and will therefore be responsible for the difference between in-state and out-of-state tuition costs each semester for their second and third years. The difference between in-state and out-of-state tuition costs for which a non Colorado resident will be responsible may range from $6,500 to $7,500 per year, however, these costs may be subject to change.

Veterinary licensure: A veterinarian who is employed at a school of veterinary medicine in the state of Colorado and who practices veterinary medicine in the course of his or her employment responsibilities shall either make written application to the State Board of Veterinary Medicine for an academic license or shall
otherwise become licensed to practice veterinary medicine within the state of Colorado. More information on this process can be found at the following link:
