NOW IN ITS NINTH YEAR, the Rocky Mountain Reproductive Sciences Symposium brings together a diverse group of scientists from across the region to discuss advances in human and animal reproduction. Hosted by Colorado State University’s renowned Animal Reproduction and Biotechnology Laboratory, the day’s events feature abstract presentations, poster sessions and keynotes by two leaders in the field of reproductive physiology. This event brings a “bench-to-bedside” thematic focus, with the aim of fostering interaction between basic scientists, physician-scientists and clinicians along the Front Range.

**Keynote speakers**

**BASIC SCIENCE:** “Developmental programming of offspring metabolism by maternal obesity”
with Peter W. Nathanielsz, MD, PhD, ScD, FRCOG
Distinguished Professor of Life Course Health, University of Wyoming

**CLINICAL SCIENCE:** “Clinical issues in obesity and pregnancy” with Patrick M. Catalano, MD
Dierker-Biscotti Women’s Health and Wellness/Reproductive Biology Professor, Director, Center for Reproductive Health at MetroHealth & Clinical Research Unit of the Case Western Reserve
