VTH Clinicians and Technicians:

As of Monday, November 16, the VTH Fee Estimator has been moved off of the Citrix server and is available through a new Microsoft VDI (virtual desktop infrastructure) service.

The application will function exactly the same, but the method used to start the application will be different. This change is expected to provide the following benefits:

1. Faster and easier startup of the application.
2. Access to the application from not only PC, but Mac computers and iOS devices.
3. Reduction in cost and time required to manage the infrastructure necessary to host the applications.

Documentation on how to install the application onto your CSU or personal PC, Mac, or iOS device can be found at http://csu-cvmbs.colostate.edu/Documents/vth-fee-application-remote-app-installation.pdf. If you don’t want to try installing this application yourself, you can also schedule an appointment with the CVMBS IT Services Helpdesk who can perform the installation for you.

Alternatively, if you have a PC (using the link with a Mac is not recommended), clicking on this link: https://cvmvdiprod01.cvmbs.colostate.edu/rdweb/pages/ should allow you to run the application in a browser without having to actually install anything. You can also copy the link and paste it into whatever browser you wish to use. Full instructions (and screen prints) on this process can be found in the documentation referenced above. You will need to re-authenticate each time you use the application.

For questions or concerns, please contact the CVMBS IT Services Helpdesk.
